

Digital Sovereignty Starts with Data Under Your Control.

Build on an auditable, vendor-neutral infrastructure that ensures your data remains fully under your operational authority.

☞ Why CLYSO? We Shape the Standard.

Three Core Pillars:

- 01. Control Over Data Residency & Hardware Choice:** Maintain greater control over data residency and hardware choice while reducing long-term vendor dependency.
- 02. Enterprise Storage Platform (CES):** CES is a validated enterprise storage platform with hardened releases and 24/7 expert engineering support.

03. Strategic Upstream Influence:

Through active Ceph Foundation involvement, CLYSO brings public-sector priorities such as stability, auditability, and lifecycle control into the upstream roadmap.

Core Use Cases:

E-Government:

S3-compliant object storage for digital records, e-files, and citizen portals.

Law Enforcement:

Highly scalable storage architectures tailored for forensic video ingestion and evidence preservation.

Cyber Resilience:

Immutable recovery points and protected backup designs help restore essential services after ransomware incidents.

Modernization:

Support planned VMware-exit programmes by reducing storage dependency and enabling sovereign cloud architectures.

About CLYSO

As Ceph specialists with enterprise support for CES, CLYSO helps public-sector organisations operate sovereign storage with lower operational risk.
